

Answer Engine Optimisation — ExpertCoach

A six-month, done-for-you engagement to make expertcoach.co the source AI assistants cite for ICF coaching certification.

SERVICE PROVIDER	CLIENT	TERM & VALUE
Novastacks AI Pte Ltd Tina Chu, Founder tchu@novastacks-ai.com	ExpertCoach Yigit Yucel, Founder expertcoach.co	6 months 1 Sep 2026 – 28 Feb 2027 S\$6,000 total

1 Background and objective

ExpertCoach publishes approximately 16 content pages and is losing share of voice in AI-assistant answers to CredentialPrep and CoachCertify, both executing on greater volume and cleaner technical structure. The Client operates as a single founder and is constrained by production capacity, not strategy — so this engagement is scoped as done-for-you.

The objective is to increase the frequency with which ExpertCoach is **mentioned and cited by ChatGPT, Gemini, Claude and Perplexity** in response to the questions its buyers ask — measured against a fixed prompt set and a week-two baseline.

2 Scope of services

2.1 Discovery and baseline — weeks 1–2

- **Technical and AEO audit** — crawlability, indexation, architecture, internal linking, structured data and machine-readability.
- **Prompt set construction** using our prompt methodology, simulating how ICF-track coaches ask assistants about certification and provider choice.
- **Keyword and content-gap database** built from the Client's Search Console data and first-party inputs.
- **Competitor citation teardown** — which CredentialPrep and CoachCertify pages are cited, for which prompts, and why.
- **Baseline report and dashboard configuration** across all four assistants, handed over with Client login. Platform licence is a suggested add-on — clause 6.

2.2 Technical implementation — done for you

- **We implement, you approve.** With publishing access to the Astro site we ship the fixes ourselves and notify the Client of every change. Client development time is never the bottleneck.
- **Implementation documentation** — every change ranked by impact and written up step by step, so the Client holds a record of what was altered and why.
- **Architecture and structured data** — hub-and-spoke structure, URL taxonomy, internal linking and schema, built for machine retrieval rather than human browsing.
- **Ongoing technical monitoring** throughout the term. We identify, fix and report; the Client need not detect faults.

2.3 Content production — minimum 60 pages, no cap

- **Minimum 60 pages across the term** — a floor, not a ceiling. Where a typical agency quotes four or five pages a month and stops at the retainer line, we keep producing and refreshing while the citation data shows ground to take.
- **Brief, draft, review, publish** — researched against the gap database, drafted to a citation-oriented structure, supplied in Google Docs for approval, then published directly by us.
- **Refreshed as many times as needed.** Pages are revisited whenever the data shows a competitor page cited over ours. Refreshes are not counted against the 60.

2.4 Measurement and reporting

- **Daily AI-visibility tracking** on the fixed prompt set across all four assistants, answers retained so movement can be explained, not just observed. We configure, operate and interpret the platform; the Client licenses it.
- **Client dashboard**, live throughout: share of voice, citations, competitor position, and the verbatim answers assistants give about ExpertCoach.
- **Monthly written report and 60-minute strategy call** — what was delivered, what moved, the reasoning, and next month's plan.
- **A shared working channel** alongside the report and call, so changes are visible as they happen, not a month later.
- **Off-page and community signals** — where third-party citations, forums or review platforms influence AI answers, we surface them and recommend action.

3 Not included

- **Off-page and backlink acquisition** — link building, digital PR, guest placement, review-platform seeding. Available as an add-on, clause 6.
- **Community outreach execution** — Reddit, forum and community participation.
- **Paid media** — search or social advertising management, and media spend.
- **Non-English content**, translation and localisation.

4 Why Novastacks — and how this differs

	AI-VISIBILITY SAAS TOOLS	CONVENTIONAL SEO / CONTENT AGENCY	NOVASTACKS
Who does the work	You do. The tool reports; you still research, write, fix and publish.	Junior writers to a brief; technical fixes handed back to your developer.	Done for you, end to end. Director-level operators research, write, fix and publish directly to your site.
The prompt set	You define and maintain the queries — the hardest, most consequential step.	Usually absent. Keyword rankings stand in for AI visibility.	Built for you from your Search Console data using our prompt methodology, tracked daily.
Technical faults	Flagged, sometimes. Fixing is out of scope.	Reported to you, then quoted as a separate project.	Found and fixed without being asked. We don't wait to be told what is broken.
Content model	Not offered.	Publish and move on. Four or five pages a month, capped at the retainer line.	Minimum 60 pages, no cap. Publish → measure citations → analyse who was cited instead → refresh, as often as the data says.
What arrives monthly	A dashboard you interpret.	A report of activity completed.	A decision. What we did, what moved, why, and what is next — in a working session, not emailed.

TRACK RECORD

A client entering a competitive US market at **0.3% AI visibility** was set a three-month target of 3%; it was met within the first month of publishing. A second holds **40% share of voice**. Results are market-specific and not warranted here.

5 Cadence and KPI

STAGE	WHAT HAPPENS → INDICATOR
Weeks 1–2	Audit, prompt set, tracking and publishing access live → baseline locked
Weeks 3–4	KPI and six-month target agreed in writing → KPI appendix signed
Ongoing	Continuous implementation, production and refresh, steered by the citation data; report, call and shared channel throughout → citations, then share of voice
Month 6	Minimum 60 pages live and compounding → KPI assessed

Setting the KPI. The six-month target is deliberately not fixed at signature. We establish the baseline in week two, then propose a target — an increase in AI visibility across the fixed prompt set — agreed in writing by end of week four and appended to this SOW. A target set before the baseline is a guess; set after it, a commitment both sides can hold.

6 Fees and payment

\$S\$1,000
per month

\$S\$6,000 total contract value over six months.
Invoiced monthly in advance, payable within 7 days; no setup fee. In SGD, exclusive of applicable taxes.

Six invoices of \$S\$1,000, raised on the 1st of each month from 1 September 2026 to 1 February 2027.

Founder rate, non-precedent. Standard engagements start at US\$3,000–10,000 per month; equivalent scope exceeds \$S\$18,000.

SUGGESTED ADD-ON

AI-visibility tracking platform · from US\$30 per month.
Recommended, and the basis for the clause 5 KPI — we suggest at least **30 prompts** tracked so the baseline is meaningful.
Licensed by the Client directly; we specify, configure, operate and interpret it, and **apply no mark-up**.
Other add-ons · quoted on request. Backlink and off-page acquisition, and anything else under clause 3 — proposed only where the data shows it is the binding constraint.

7 Client responsibilities and terms

- **Publishing access.** Direct access to the Astro site, plus Search Console, GA4 and search tooling. This is what makes the engagement done-for-you rather than advisory.
 - **Approvals and sync.** Drafts reviewed within three working days; a shared channel kept open for day-to-day decisions. Roughly two hours of Client time per month in total.
 - **Term.** Six months from 1 Sep 2026. Either party may terminate from the end of month three on 30 days' notice; fees to that date remain payable.
- **Ownership.** All content, briefs, databases, audits and reports are the Client's on payment of the relevant invoice.
 - **Dashboard and confidentiality.** Platform access throughout the term and 30 days after. Each party keeps the other's non-public information confidential.
 - **Performance and law.** The clause 5 KPI is a good-faith target, not a warranty; AI ranking systems are third-party controlled. Governed by the laws of Singapore.
