

Answer Engine Optimisation — ExpertCoach

A six-month engagement to make expertcoach.co the source AI assistants cite for ICF coaching certification.

SERVICE PROVIDER	CLIENT	TERM & VALUE
Novastacks AI Pte Ltd Tina Chu, Founder tchu@novastacks-ai.com	ExpertCoach Yigit Yucel, Founder expertcoach.co	6 months 1 Sep 2026 – 28 Feb 2027 S\$6,000 total

1 Background and objective

ExpertCoach publishes approximately 16 content pages and is losing share of voice in AI-assistant answers to CredentialPrep and CoachCertify, both executing on greater volume and cleaner technical structure. The Client operates as a single founder and is constrained by production capacity, not by strategy.

The objective is to increase the frequency with which ExpertCoach is **mentioned and cited by ChatGPT, Gemini, Claude and Perplexity** in response to the questions its buyers actually ask — measured against a fixed prompt set and a baseline set in week two.

2 Scope of services

2.1 Discovery and baseline — weeks 1–2

- **Technical and AEO audit** — crawlability, indexation, architecture, internal linking, structured data and machine-readability of existing pages.
- **Prompt set construction** using our prompt methodology, simulating how ICF-track coaches ask assistants about certification and provider choice.
- **Keyword and content-gap database** built from the Client's Search Console data and first-party inputs, not generic keyword lists.
- **Competitor citation teardown** — which CredentialPrep and CoachCertify pages are cited, for which prompts, and why structurally.
- **Baseline report and dashboard configuration** across all four assistants, handed over with Client login. Platform licence billed separately — clause 6.

2.2 Technical and structural optimisation

- **Implementation documentation** — every audit issue ranked by impact and written up as a step-by-step specification for the Client's Astro codebase. The document is the deliverable; the Client implements from it.
- **Architecture design** — hub-and-spoke structure, URL taxonomy and internal linking built for machine retrieval, not human browsing.
- **Structured data specification** across content and service pages.
- **Ongoing technical monitoring** throughout the term. We identify and specify faults proactively; the Client need not detect or report them.

2.3 Content production — 60 pages over six months

- **60 pages in total** — new content plus structural refreshes of the existing 16 posts, averaging 10 pages per month across the term.
- **Brief, draft, review, publish** — researched against the gap database, drafted to a citation-oriented structure, supplied in Google Docs for approval, then published.
- **Monthly refresh cycle** on published pages, driven by which pages earn citations and which competitor pages beat our drafts in AI answers.

2.4 Measurement and reporting

- **Daily AI-visibility tracking** on the fixed prompt set across all four assistants, answers retained so movement can be explained, not just observed. We configure, operate and interpret the platform; the Client licenses it.
- **Client dashboard**, live throughout: share of voice, citations, competitor position, and the verbatim answers assistants give about ExpertCoach.
- **Monthly written report and 60-minute strategy call** — what was delivered, what moved, the reasoning, and next month's plan.
- **Off-page and community signals** — where third-party citations, forums or review platforms influence AI answers here, we surface them and recommend action for the Client to execute.

3 Exclusions

Expressly outside this SOW; may be quoted separately.

- **Off-page and backlink acquisition** — link building, digital PR, guest placement, review-platform seeding. Available as an add-on; see clause 6.
- **Community outreach execution** — Reddit, forum and community participation.
- **Software development** — we document technical fixes in full; the Client implements them in its Astro repository.
- **Paid media** — search or social advertising management, and media spend.
- **Non-English content**, translation and localisation.
- **Third-party tool licences** — the AI-visibility tracking platform, licensed by the Client directly. Priced at clause 6.

4 Why Novastacks — and how this differs

	AI-VISIBILITY SAAS TOOLS	CONVENTIONAL SEO / CONTENT AGENCY	NOVASTACKS
Who does the work	You do. The tool reports; you still research, write, fix and publish.	Junior writers executing to a brief, supervised at a distance.	Director-level operators who have run acquisition marketing at scale, on an AI production system they built.
The prompt set	You define and maintain the queries — the hardest, most consequential step.	Usually absent. Keyword rankings stand in for AI visibility.	Built for you from your Search Console data using our prompt methodology, tracked daily.
Technical faults	Flagged, sometimes. Fixing is out of scope.	Reported to you, then quoted as a separate project.	Found and specified without being asked. We don't wait to be told what is broken.
Content model	Not offered.	Publish and move on. Volume is the deliverable.	Publish → measure citations → analyse who was cited instead → refresh. The loop is the product — it is why pages compound.
What arrives monthly	A dashboard you interpret.	A report of activity completed.	A decision. What we did, what moved, why, and what is next — in a working session, not emailed.

TRACK RECORD

A client entering a competitive US market at **0.3% AI visibility** was set a three-month target of 3%; it was met within the first month of publishing. A second holds **40% share of voice**. Results are market-specific and not warranted here.

5 Timeline and KPI

PERIOD	MILESTONE → INDICATOR
Weeks 1–2	Audit, prompt set, tracking and dashboard live; implementation documentation delivered → baseline locked
Weeks 3–4	KPI and six-month target agreed in writing → KPI appendix signed
Months 1–2	Client implements documented fixes; first content batches published → pages crawled and indexed
Months 3–4	Production continues; monthly refresh cycle running → first citations, share of voice moves
Months 5–6	Final batches; refresh compounding → 60 pages live, KPI assessed

Setting the KPI. The six-month target is deliberately not fixed at signature. We establish the baseline in week two, then propose a target — an increase in AI visibility across the fixed prompt set — which both parties agree in writing by end of week four and append to this SOW. A target set before the baseline is a guess; set after it, it is a commitment both sides can hold.

6 Fees and payment

\$S\$1,000
per month

\$S\$6,000 total contract value over six months.
Invoiced monthly in advance, payable within 7 days. No setup fee.
In Singapore dollars, exclusive of applicable taxes.

Six invoices of \$S\$1,000, raised on the 1st of each month from 1 September 2026 to 1 February 2027.

Founder rate, non-precedent. Standard engagements start at US\$3,000–10,000 per month; equivalent scope exceeds \$S\$18,000.

ADD-ONS – NOT INCLUDED ABOVE

AI-visibility tracking platform · from US\$30 per month. Priced by prompt volume; we recommend tracking **at least 30 prompts** so the baseline and KPI are meaningful. Licensed by the Client directly — we specify, configure, operate and interpret it under clauses 2.1 and 2.4, and **apply no mark-up**.

Backlink and off-page acquisition · quoted on request.
Proposed only where citation analysis shows off-page authority is the binding constraint.

7 Client responsibilities and terms

- **Access and implementation.** Search Console, GA4, search tooling and a publishing path into the Astro site; the Client implements from the implementation documentation.
 - **Approvals.** Drafts reviewed within three working days; roughly two hours of Client time per month in total.
 - **Term.** Six months from 1 Sep 2026. Either party may terminate from the end of month three on 30 days' notice; fees to that date remain payable.
- **Ownership.** All content, briefs, databases, audits and reports are the Client's on payment of the relevant invoice.
 - **Dashboard and confidentiality.** Platform access throughout the term and 30 days after. Each party keeps the other's non-public information confidential.
 - **Performance and law.** The clause 5 KPI is a good-faith target, not a warranty; AI ranking systems are third-party controlled. Governed by the laws of Singapore.
